

QUALITY POLICY

Advanced Rail Controls Private Limited is committed to Design, Develop, Manufacture and Supply cost effective, globally competing, energy efficient and environment friendly technologies for propulsion, power conditioning & control equipments needed for various types of rolling stocks used in Rail Transportation and enhance the satisfaction level of customers and all interested parties through the following guiding principles;

- Delivering consistent and reliable quality products and services on time.
- Being responsive to internal and external issues which influence our organisational performance.
- Ensuring effective implementation and continual improvement of 'Quality Management System' through periodic reviews.
- Developing employee motivation and skill through training, teamwork and resource management.
- Ensuring compliance to all applicable requirements.

This policy shall form the basis of establishing Quality Objectives at all levels, and by its implementation, we are committed to carry out our business in a professional manner.
